GREAT SLIDES
LOUSY SLIDES
BESPOKE SLIDES

GOOD PRESENTATIONS

CLEAR, SHARP, EASY TO FOLLOW

ELEMENTS OF A GOOD PRESENTATION

1. Clear and Memorable Structure
2. Visual Use of Data
3. Aesthetic Pleasure

Ideological Distance from Senator Kennedy (D-Mass.)

Ginsburg	.0891
Breyer	.2375
Kennedy	.3465
Souter	.3912
Thomas	.6187
Roberts	.6613
Rehnquist	.7802
Scalia	.8551

Empirical baseline: Sweden 2002

BAD PRESENTATIONS

BUSY, VAGUE, INCOMPREHENSIBLE

ELEMENTS OF A BAD PRESENTATION

1. Too much color / visual chaos
2. Too much text / too small fonts
3. Nested hierarchies of bullets
4. Vague overall message

RUMSFELD

GETTYSBURG ADDRESS

Review of Key Objectives & Critical Success Factors

- What makes nation unique
 - Conceived in Liberty
 - Men are equal
- Shared vision
 - New birth of freedom
 - Gov't of/for/by the people

11/19/1863

THE MASTER HIMSELF

What does this have to do with political science?

- The analysis of housing is not a core part of political economy. Typically examined by urban economics and geography.
- Yet, in many cases citizens are purchasing properties that are valued at between five and ten times their annual income. The only asset that matters to many people.
- As income growth stagnates, asset valuations have rocketed. Thus, 'paper incomes' are closely tied to asset valuation.
- Many people treat stock ownership / housing as a 'nest egg' for retirement or against unemployment. How does asset ownership affect valuation of risk?
- Politics of macroeconomics. Do dependent and independent central banks differ? Can partisan business cycles emerge? What do left-wing and right-wing parties want?

Some Preliminary Comparative Statics

- Higher expected asset inflation will lead to a demand for lower rates of pension provision by asset owners.
- Higher expected asset inflation will lead to a demand for lower rates of unemployment insurance by all citizens if asset and price inflation are strongly positively correlated.
- Right-wing parties will prefer higher asset inflation all else equal - and will do so more strongly the less the correlation between price and asset inflation.
- Left-wing parties will prefer lower asset inflation unless price and asset inflation are strongly correlated.
- Independent central bankers will lead to lower asset inflation provided they are not right-wing partisans and provided price and asset inflation are strongly correlated.

What are the implications of PR

- More parties
- Easier for new parties to get elected
- Coalition gov't are likely
- Elections do not necessarily produce clear winners – the formation process can be as important as the election
- Electorate selects parties not people
- May privilege broad based parties over those with concentrated support (e.g. class based parties over regionally based parties)
- May be easier for women and minorities to get elected
- But.... candidate selection and ranking on the list can be controversial
- Some argue it is fairer, others claim it reduces link between the voter and the MP and produces instability
- What does this all add up to????? More diversity, less stability, less power for a single part

TAILORED PRESENTATIONS

CHOOSING THE RIGHT SLIDES FOR THE OCCASION

DIFFERENT VENUES...

...Require Different Presentations

1. Giving a Job Talk
2. Giving a Conference Presentation
3. Teaching a Lecture

GENERAL ADVICE

Always have backup plans.

Save in pdf. unless animation is a must.

You will always break the length rules.

JOB TALKS

Aim for 35-40 minutes. Use 30 slides.

ALWAYS put argument at front and end.

Prepare slides for Q&A to have as back up.

CONFERENCES

Prepare for ten minutes. You'll use 15.

Less need for repetition.

Be prepared for overhead projectors.

TEACHING

My strategy is to prepare a large amount of slides to stretch over four lectures.

Audio-visual more important.

Don't let students rely on getting slides.

JOB TALK: 40 MINS, 30 SLIDES

CONFERENCE: 15 MINS, 10-15

SLIDES
